SWOS Final Workshop and Conference

Satellite-based Wetland Observation
Tools and Services for Wetland
Monitoring, Restoration and
Management

5 to 7 November 2018
Brussels, Belgium

at the Royal Flemish Academy of Belgium
for Science and the Arts

KVAB Koninklijke Vlaamse Academie van België
voor Wetenschappen en Kunsten

What's the Workshop about?

- **On 5-6 November:** final workshop on SWOS in which participants can familiarise themselves with the various SWOS tools and services in an interactive and dynamic 'World Cafe' format.

Different sessions offered according to participants' pre-existing knowledge and the tasks that they have to fulfill within their user organisation.

Several training and in-depth sessions, covering topics from how to find satellite data to indicators and use cases including nomenclatures, metadata, software and user portal functions, will be offered.

What's the Final Conference about?

- **On 7 November:** full-day conference on the threats and trends affecting wetlands and the role of SWOS in filling the information gap on wetlands and providing fact-based evidence for appropriate policy responses.

The conference will draw speakers from the worlds of science, policy and wetland management for a day of stimulating discussion.

You can find more information about the SWOS Final Workshop and Conference on the SWOS website:
